

Tragar Oil provides clean, renewable and energy-efficient alternatives to meet your heating and cooling needs.

Levittown Homeowners!

Alternative Energy is here!

Introducing **BIOHEAT**

Not all heating oil is the same. One of the easiest ways to 'green' your home is to choose cleaner fuel.

Tragar Oil offers homeowners a B-5, 5% soy bean blended heating oil.

The benefits of using bioheat:

- **Cleaner Air**
releases fewer harmful emissions
- **Renewable Source**
utilizes agricultural resources
- **Domestic Product**
reduces dependence on foreign oil
- **Cleaner Fuel**
cleans your tank & heating system

THE SMART CHOICE

BIOHEAT

It's Clean, Green
& Made from a Bean!

Delivered at no additional cost!

*Works with your existing
heating equipment!*

Experts in the Heating & Cooling Industry Since 1956

- Automatic Fuel Delivery
- Professional & Reliable Service
- Efficient Equipment Installations
- Heating & A/C Service Contracts
- Competitive Pricing
- Price Protection & Budget Plans
- Green Purchasing Consultation

DID YOU KNOW ?

If all Long Island homes used American-grown bioheat, foreign imports of heating oil would be reduced by 60 million gallons every year!

Heating

Case Study by
US DEPARTMENT OF ENERGY
Fuel Savings & Payback Analysis

A pilot study was conducted to accurately measure fuel savings on new energy-efficient oil boilers. The results of the controlled test showed an average savings of 26%. Homes burning nearly 1,000 gallons annually at an average price of \$3.20 per gallon saved \$832.

*There is no greater
green investment
that provides a
faster rate of return
than upgrading to
energy-efficient
equipment
for heating & cooling
your home!*

Cooling

Tragar only uses R410A environmentally-friendly Puron refrigerant which doesn't deplete the ozone layer.

SAVE MONEY ON YOUR CENTRAL AIR SYSTEM

Install or upgrade to a higher Seasonal Energy Efficiency Ratio (SEER). The higher the SEER rating, the greater the LIPA cash rebates you can receive.

Tips for Saving Energy

UPGRADE TO AN ENERGY STAR BOILER

By installing new Energy Star heating equipment, you will use up to 30% less oil and lower your utility bill substantially.

UPGRADE YOUR OIL BURNER PACKAGE

If an oil system is over 10 years old, replacing the old burner with a retention head burner is significantly less expensive than replacing the entire system. You can increase your boiler's efficiency by 15%. The payback can be as quick as two years.

USE WATER MORE EFFICIENTLY

Heating water represents up to 20% of total home energy costs. Insulating your hot water tank, lowering the water temperature, installing water-saving shower heads and using cold water for laundry are just some money saving options.

INSTALL ENERGY-SAVING DEVICES

One inexpensive energy-saving device is a programmable thermostat. For every degree you lower the thermostat, you will save at least 1% in efficiency. Lower the temperature while you are sleeping or away from home.

SCHEDULE AN ANNUAL TUNE-UP

An annual tune-up will ensure maximum performance of every drop of heating oil and every watt used to generate heat and electricity, reducing your energy costs by 10%.
